

POS Platform – Detailed Feature Requirements & Phase Alignment Document

Prepared for Product Alignment and Feature Confirmation

1. Purpose of This Document

This document is created to clearly translate the functionality of the reference systems:

- Kwick POS
- Menusifu
- POSalon
- PCAmerica

into a **complete, structured, and build-ready feature set**.

The goal is:

- To ensure no critical feature is missed
- To remove ambiguity from written descriptions
- To align expectations before development begins
- To map all features into the planned 4-phase architecture

2. Platform Overview

The requested system is not a basic POS.

It is a **multi-tenant SaaS commerce platform** with:

- Super Admin control
- Multiple merchants
- Multiple stores per merchant
- Multiple devices per store
- Shared customer system
- Shared gift cards and memberships across locations
- Offline-first operation
- Hardware abstraction (printers, terminals)
- Multi-business mode support:
 - Restaurant
 - Salon / Beauty
 - Retail

3. System Architecture Principles

These must remain true across all phases:

3.1 Shared Merchant Data Model

- Customers shared across stores
- Gift cards usable across all locations
- Memberships shared
- Unified reporting

3.2 Store-Level Flexibility

- Each store can operate in:

- Restaurant mode
- Salon mode
- Retail mode

3.3 Role-Based Permissions

- Action-level control:
 - Discount permission
 - Refund permission
 - Price override
 - Closing authority

3.4 Offline-First System

- Orders must work offline
- Local storage required
- Auto-sync when internet returns
- Card payments disabled offline

3.5 Hardware Abstraction

- No lock-in to one terminal or printer
- Support LAN printers
- Support PAX terminals

4. Phase-Based Delivery Plan

Phase 1 – Core POS Foundation (Operational MVP)

Goal:

Enable a merchant to operate one or more stores with essential POS functionality.

Included Features:

Platform Core

- Multi-tenant architecture
- Super Admin dashboard
- Merchant creation
- Store creation
- Device registration

POS Core

- Product catalog
- Pricing, tax, discounts
- Cart & order creation
- Receipt generation

Customer System

- Customer profiles
- Basic member records

Restaurant Basics

- Dine-in
- Takeout
- Counter ordering

Printing

- LAN receipt printing

Permissions

- Role-based system
- Action-level control

Offline Mode

- Local order capture
- Sync queue system

Phase 2 – Payments & Advanced Operations

Goal:

Make the system commercially usable.

Included Features:

Payments

- Card integration (PAX)
- Tips support
- Split payments

Customer Value System

- Gift cards
- Membership cards
- Cross-store usage

Restaurant Enhancements

- Label printing (bubble tea / coffee)
- Print routing rules

Operational Improvements

- Advanced offline sync
- Refund & void controls
- Audit logs

SaaS Billing

- Per store billing
- Per device billing

Phase 3 – Salon & Workforce Expansion

Goal:

Enable salon workflows and staff management.

Included Features:

Workforce Management

- Staff check-in / check-out
- Shift tracking
- Attendance logs

Payroll

- Hourly wage setup
- Payroll-ready calculations

Salon Mode

- Service catalog
- Appointment system
- Staff-service assignment

Reporting

- Staff performance
- Labor analytics

Phase 4 – Integrations & Scale

Goal:

Expand ecosystem and scale platform.

Included Features:

Delivery Integration

- Uber Eats
- DoorDash
- Aggregator support

Sync Features

- Menu sync
- Order ingestion
- Status updates

Scale Improvements

- Multi-store scaling
- Device monitoring
- Exception handling

5. Restaurant Mode (Kwick + Menusifu Equivalent)

5.1 Order Types

- Dine-in
- Pickup
- Delivery
- Walk-in

5.2 Table Management

- Table layout system
- Table status (occupied, free)
- Merge tables
- Split bills
- Transfer orders

5.3 Online Order Management (CRITICAL FEATURE)

Based on provided screenshots:

- Online Order ON / OFF toggle
- Pause online orders:
 - 30 minutes
 - 1 hour
 - 2 hours
 - Rest of day
- Pickup time control:
 - Adjustable (e.g., 20 min)
- Delivery time control:
 - Adjustable (e.g., 60 min)

5.4 Menu System

- Categories
- Modifiers
- Add-ons
- Combo meals
- Sold-out toggle

5.5 Kitchen & Printing

- Kitchen printers
- Label printers
- Print routing rules

5.6 POS Utility Panel (from screenshots)

Must include:

- Refund
- Payout
- Gift card
- Open drawer
- Cash count
- End closing
- Reports:
 - Cashier
 - Daily
- Device status
- Recall orders
- Language switch
- Back office

5.7 Payments

- Cash
- Card
- Split payments
- Tips

5.8 Customer Features

- Order history
- Notes
- Membership pricing

6. Salon Mode (POSalon Equivalent)

6.1 Appointment System (CRITICAL)

- Calendar scheduling
- Time-slot booking
- Walk-in + appointment

6.2 Service Management

- Service catalog
- Duration control
- Pricing

6.3 Staff Assignment Logic (CRITICAL)

- Service can:
 - Require staff
 - Allow optional staff

6.4 Commission System (CRITICAL)

- Commission goes to performing employee
- Per-service rules

6.5 Employee Management

- Profiles
- Permissions
- Shift tracking
- Attendance

6.6 Payroll

- Wage setup
- Hours calculation
- Payroll reports

6.7 Membership & Customers

- Member profiles
- Discounts
- Loyalty

6.8 Gift Cards

- Issuance
- Top-up
- Balance tracking

6.9 Orders & Billing

- Multi-service billing
- Receipts
- Order history

6.10 Items & Combos

- Product + service bundles
- Packages

6.11 Financial Tracking

- Card records
- Transactions

6.12 Back Office

- Reports
- Store settings
- Staff management

7. Retail Mode (PCAmerica Equivalent)

7.1 Inventory System

- SKU
- Barcode
- Variants

7.2 Inventory Operations

- Stock levels
- Adjustments
- Transfers
- Receiving

7.3 Sales Flow

- Fast checkout
- Barcode scanning
- Returns

7.4 Pricing

- Discounts
- Promotions

7.5 Customers

- Profiles
- Purchase history

7.6 Reporting

- Sales
- Inventory

7.7 Back Office

- Item setup
- Store settings
- Permissions

8. Shared Features Across All Modes

- Multi-store shared data
- Role permissions
- Offline support
- Device management
- Audit logs

9. Key Clarifications Required Before Development

1. Which mode is first launch
2. Payment provider selection
3. Delivery integration approach
4. Payroll complexity
5. Level of feature parity with reference systems

10. Final Note

This document ensures:

- All features from reference systems are captured
- No major functionality is missed
- Development can proceed with clarity

Additional refinements can be added during later phases.
